🔗 LeetCode

Profile

AI practitioner focused on building agent-based systems and autonomous workflows using LangChain and multi-agent frameworks. Experienced in Generative AI and Transformer models, including RAG pipelines and fine-tuning LLMs for domain-specific tasks. Strong background in Deep Learning and Data Science with hands-on work in TensorFlow and Scikit-learn, consistently improving model performance by 15%+ across projects. Enjoys writing clean, production-ready code and turning ideas into practical AI solutions.

Skills

- **Languages:** Python, Java, JavaScript, R, C
- **AI/ML:** Transformers, CNNs, RNNs, NLP
- **Generative AI:** LangChain, LangGraph, RAG, Prompt Engineering, Google ADK
- **Frameworks:** Flask, Django
- **Databases & Vector DBs:** MySQL, MongoDB, Pinecone, ChromaDB, Astra DB
- **Tools & Libraries:** TensorFlow, Scikit-learn, Pandas, NumPy, Matplotlib, MLflow, Dagshub, Git, Docker, SQL
- **Core CS:** DBMS, Networking, Data Structures, OOP

Projects

AI Resume Analyzer & Job Matcher 🔗

- Built an AI-based system to analyze resumes vs job descriptions using NLP with TF-IDF/embeddings for relevance scoring
- Implemented ATS-style scoring using keyword extraction and similarity matching for accurate evaluation
- Developed a Streamlit-based web app generating actionable feedback to improve resume alignment and ATS performance

Code Review Agent 🔗

- Built an AI-powered code review tool using Flask and Ollama for fast, automated feedback
- Combined static analysis tools (pylint, bandit, radon) with LLM reasoning to improve accuracy
- Implemented chunking for large codebases and designed a scalable, modular backend with structured outputs (bugs, security, performance) and multi-language support

SafeSpace - AI Mental Health Chatbot 🔗

- Built an empathetic AI chatbot providing 24/7 mental health support using NLP
- Developed real-time sentiment and risk detection to identify distress and suicidal intent
- Integrated Twilio API to trigger emergency calls to helplines or trusted contacts in critical situations

Face Emotion Detection 🔗

- Built a CNN model to classify 7 emotions using FER-2013 with augmentation & dropout for improved accuracy
- Implemented real-time face detection using OpenCV (Haar Cascades), optimized for low-latency performance

Education

Bachelor of Engineering in Computer Science and Artificial Intelligence

Present

Parul University

Pursing (CGPA : 8.84)

Certificates

- Retrieval Augmented Generation (RAG) with LangChain IBM SkillsBuild
- GenAI Job Simulation BCG (Forage)
- Cloud Foundations AWS Academy
- Data Analytics Job Simulation Deloitte (Forage)
